EntityDAC Professional For Windows 10 Crack is a professional-level ORM solution designed to provide enterprise level mapping abilities. It supports the full mapping between database objects and objects in object oriented languages, as well as the support of Delphi's own properties. It offers flexible code generation and an easy database-object mapping solution. It uses the best of the ORM world to help you create amazing solutions for your products. Key Features: -Automated design generation -Code generation -Code Completion -Database reverse engineering -Entity generator -Fast editing in Tree Views -Hibernate support -Language-integrated query (LINQ) -Object relational mapping (ORM) -Reverse engineering -SQL (Structured Query Language) -T4 templates -Visual design and modeling -XML reverse engineering -XML generation -XML validating -XML editing The goal of the project is to develop a database-to-class-mapping application for the Delphi programming language. The main goal of the application is to provide developers a framework to easily map tables to classes using the object-oriented language of their choice. EntityDAC Pro supports three different model development approaches: -Model first -Database first -Code first These three approaches allow users to select which model development strategy suits their needs. Using ORM, EntityDAC Pro can create, edit and validate entities. It can also generate a database schema based on the model. EntityDAC Pro is delivered with Entity Developer, a powerful application that can assist users in the creation and editing operations of their ORM models. EntityDAC Pro also provides a set of tools that aid the user in the mapping of a model to database tables. EntityDAC Pro supports the full generation of a single or multiple entity tables, either from a database schema, or from an existing SQL file or Hibernate file. It also comes with a full set of utilities that make it possible to manage and modify the database schema. -Strong XML reverse engineering support -T4 templates -Database schema reverse engineering support -XML transformation support The aim of the project is to support XML reverse engineering for Delphi and create a set of tools that can help you translate XML to Delphi objects, as well as generate Delphi objects from XML. In addition to this, EntityDAC Pro will include support for Delphi's own

EntityDAC Professional Crack+

A dynamic macro created to ease the implementation of the Object Relational Mapping. Features: Using the macro, you can convert your database tables to Delphi objects. Entity classes and attributes are generated using the code completion engine of Delphi. You can define relations with other entity classes and use polymorphism to map Mapping by means of Reflection, which is not the preferred way of doing things. License: EntityDAC is licensed under the GNU GPL. In order to load this driver you should use the DUnitX driver file found in the directory of the application being tested. The DUnitX.dll file is part of the DUnitX package, which is part of the DUnitX-gui package. The DUnitX-gui.dll file is part of the DUnitX package, which is part of the DUnitX-perf package. The DUnitX-perf.dll file is part of the DUnitX package, which is part of the DUnitX-gui package. The DUnitX-gui.dll file is part of the DUnitX package, which is part of the DUnitX-server package. The DUnitX-server.dll file is part of the DUnitX package, which is part of the DUnitX-core package. The DUnitX-core.dll file is part of the DUnitX package, which is part of the DUnitX-console package. The DUnitX-console.dll file is part of the DUnitX package, which is part of the DUnitX-gui package. The DUnitX-gui.dll file is part of the DUnitX package, which is part of the DUnitX-server package. The DUnitX-server.dll file is part of the DUnitX package, which is part of the DUnitX-core package. The DUnitX-core.dll file is part of the DUnitX package, which is part of the DUnitX-console package. The DUnitX-console.dll file is part of the DUnitX package, which is part of the DUnitX-gui package. The DUnitX-gui.dll file is part of the DUnitX package, which is part of the DUnitX-server 77a5ca646e

EntityDAC is an advanced and reliable development tool that aims to provide Delphi programmers with an Object Relational Mapping component, also offering support for Language Integrated Query. ORM is a programming method that works by converting data between incompatible systems in object-oriented languages, whereas LINQ is a component that adds native query capabilities to.NET Framework languages. The utility's main goal is to offer programmers a framework which can map database tables, using polymorphism, encapsulation, inheritance and many other techniques, to Delphi classes. EntityDAC supports three different types of model development, allowing users to pick whichever best meets their requirements, for instance 'Database First', 'Model First' or 'Code First', each option going through a series of distinct steps. Moreover, the software comes with Entity Developer, a powerful application that can assist users in the creation and editing operations of their ORM models; in addition, it is able to generate Delphi entity classes out of the input model. Using LINQ as a database query instrument, EntityDAC significantly eases the code writing process, also due to the Code Completion Delphi engine that comes into action when users type class names or attributes, keywords and other similar items. As a result of using ORM when mapping tables to Delphi classes, EntityDAC is capable of supporting the creation of new applications while also allowing for the integration of ORM into priorily developed projects. While EntityDAC is mainly addressed at experienced individuals, with a solid background knowledge into the field of software development, it does come with an extensive help documentation to assist both the advanced and the beginners in their endeavors. Alfresco SDK & SDK Builder Alfresco SDK & SDK Builder Alfresco SDK & SDK Builder Description Alfresco SDK & SDK Builder (formerly Alfresco SDK) is a component that allows you to work with SharePoint as if it was a local file system. It is a set of Delphi Components that allow users to easily interact with SharePoint lists, sites, pages, documents, lists, libraries and other objects. SharePoint SDK allows users to easily access SharePoint content from anywhere and use it wherever they want. Architecture of the Alfresco SDK and SDK Builder The current version of Alfresco SDK & SDK Builder consists of a set of components that can be used together to extend the capabilities of

What's New in the EntityDAC Professional?

EntityDAC is a highly flexible and powerful tool that allows you to define, map, and generate data-driven models of enterprise-class applications, allowing you to translate the data from databases to existing application objects. The major goal of the project is to integrate in the Delphi IDE all the options and features required for the development of data-driven applications. The utility allows you to create, modify, and generate your own models and classes for storing data in your application. EntityDAC also supports all the popular database vendors in the ORM field, including Oracle, SQL Server, MySQL and PostgreSQL. EntityDAC's ORM database connectivity has been developed and is maintained over the years, through the use of powerful solutions and techniques. The current version supports Delphi 2010, XE, XE2, XE3, XE4 and XE5. EntityDAC supports Database First, Model First and Code First development scenarios, and is able to create, edit and delete your own data models without any limitations, changing the database structure and adding/removing/modifying entities to/from database tables. The project has been developed to support all the best practices as well as guidelines for object-relational mapping. It also enables you to easily generate classes and auto-generates mapping and query utilities. EntityDAC allows you to use a single model for all your projects, while remaining independent of database vendors and integration modules. EntityDAC is a multi-threaded, multi-language and multi-platform solution, with support for all Delphi & Windows platform. EntityDAC uses a database-first approach to develop and maintain models, which use the following techniques: ' Code Completion' - this feature searches all available classes and allows you to complete and enter the class or property names as you type them. ' Select' - This feature allows you to navigate between, modify, and select an entity class or a property in a particular context. ' Insert' - This feature allows you to create new objects directly from database tables. EntityDAC supports all major database vendors: - Microsoft SQL Server 2008, 2012, 2014 and 2016 - Oracle Database 11g, 12c, and 13c - MySQL 5.1, 5.5, and 5.6 - PostgreSQL 8.4, 8.5, 9.1 and 9.3 EntityDAC provides a powerful management panel to edit, create, modify and delete your classes and other objects. Entity Developer supports all features, allowing you to create new, edit existing, and delete objects.

EntityDAC's user interface consists of several panels, such as Object Manager and Object Properties, which are arranged in a hierarchical
