If you have lost data on your Windows system, you may recover it with Disk Data Recovery Pro. It restores NTFS partitions or any ext2, ext3 or ext4 Linux partitions. It can also recover data from FAT partitions and any other file system. The software is not intended to restore OS system files, like Windows Registry, Master Boot Record (MBR) and Boot Loader. You will need to do that separately. Disk Data Recovery Pro has a small and simple interface. You can use a number of filters to select files and folders to recover. When you try the software, you will see a list of partitions. Select the partition containing the damaged data, then click on the "Recover" button. This will scan the drive and recover damaged files or folders. You can preview results, if required. If you want to restore files that were affected by a virus infection or Trojan Horse, you can also use a free scanner to find and remove them. Alternatively, you can use some data recovery tools.
